## AmeriCorps VISTA National Performance Measures Overview

AmeriCorps VISTA projects have two main conceptual components: (1) to build capacity of projects that (2) are intended to help individuals and communities out of poverty. The anti-poverty component is the reason resources are awarded to an organization while the capacity building measures are how the anti-poverty work is accomplished.

Applicants for VISTA resources provide information in the form of performance measures to AmeriCorps about both the capacity building component and the anti-poverty component of their proposed project. Applicants enter this performance measure information into the eGrants Performance Measure Module. The performance measures entered become the basis for future progress reports if the application is approved. **The Performance Measures are not designed to act as a comprehensive work plan covering each anti-poverty measure undertaken by a project.**

This document provides definitions and data collection protocols for the Performance Measures available to AmeriCorps VISTA applicants for both capacity building and anti-poverty programming.

**Capacity Building Information:** For each site that will benefit directly from the capacity-building efforts of VISTAs, applicants provide information about (1) the capacity goal they hope to reach at the site, (2) the number of VISTAs (or Leaders) they are requesting at the site and the focus of their service activities, (3) at least one capacity-building output, and (4) at least one capacity-building outcome. They also provide information about data collection plans for the capacity-building output and outcomes identified. If the application is approved, they will collect and report data for any Capacity-Building Output or Outcome selected on future progress reports, in accordance with the definitions and protocols identified for the selected measures.

**Anti-Poverty Information:** Applicants also provide information about how the organization or program will ultimately help individuals and communities out of poverty. In addition to identifying a Focus Area and Objective, applicants identify: (1) an anti-poverty output; (2) an anti-poverty outcome; and (3) an anti-poverty program strategy/intervention. Entering information about data collection plans for selected anti-poverty outputs and outcomes is optional.
